```

Linear, Ridge and Lasso Model are wrapped with abstract functions. This would facilitate readable code for model building and Model otpimization. Set Class definitions

Finding min lambda from 1000 iterations Function to find Min Lambda using bootstrap method. minlambda identified over 1000 cross validation trails. observed minlambda used for Ridge and Lasso regression.

Linear Model with Regularization Wrapper function for Ridge and Lasso regression. functions performs Ridge/Lasso regression and returns R2, Model and Predicted values as atcglmnet object

```
pred <- predict(mdl,s= min_lambda,newx=x)

# MSE
mean((pred-y)^2)
R2 <- 1 - (sum((y-pred )^2)/sum((y-mean(pred))^2))
return(new('atcglmnet', R2 = R2, mdl=mdl, pred=pred))
}</pre>
```

*
